

TELEPORT SERVICES

Global, world-class ground segment

The most advanced technology
and our complete infrastructure portfolio
to guarantee your operations.

OUR SERVICE

Telefónica Global Solutions' infrastructure is built to guarantee our customers' operations, including **eleven Teleports located** across the Americas (Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Peru, USA) and Spain, delivering services worldwide and meeting the most demanding standards quality.

Our Hubs are strategically located in areas with low rainfall levels and low risk of large weather phenomena, which helps provide a good signal transmission. Furthermore, our Teleports follow high standards such as ANSI/TIA-942 which comply with national civil defense requirements.

Delivering "always-on" infrastructure for your service is our goal

Our teleports have cutting-edge technology,
robust infrastructure and a complete service portfolio

- **Housing:**
 - From Shared or dedicated colocation space to outdoor and indoor equipment (RF, antenna, baseband, toll gate).
 - Power supply and cooling redundant systems, suitable for continuous operations for 10 days in case of contingency.
 - Detection and fire extinguishment, surveillance 24x7 and access control.
- Remote and local **hands & eyes service**. Basic and specialized level.
- **Civil works and infrastructure** installation.
- **Three 24x7 specialized NOCs** in "Follow the Sun" model with support in Spanish, English and Portuguese.
- The best **terrestrial connectivity** access from our **Hubs** with multiple options:
 - Internet, MPLS and dedicated link.
 - **Direct submarine cable** connectivity, which makes it possible to provide an uninterrupted connectivity service worldwide through fibre rings.

How do our Teleports help?

- **Global service that meets regional needs**, being the largest provider of Teleport housing services.
- **Specialized team** with extensive experience in services and satellite platforms, IP services and connectivity to give you a solution that goes from the design and implementation to the operation.
- **Customized and scalable solution** that improves your competitiveness not only from an operative and technology perspective, but also in your growth and expansion plans.
 - Ad-hoc projects, aimed at service providers: Satellite (MEO, LEO, HTS), Operators and OTTs.
 - Scalable solution according to your investment and strategy plan.
 - Take your services wherever you want through our international network MPLS.
- **High availability, SLAs and Quality of Service** thanks to our offer that includes 24 × 7 monitoring, security, service continuity and three specialized NOC.

The **value generated by the Telefónica Group** guarantees the highest quality in the most challenging connectivity environments.

Regional infrastructure

- Satellite Teleport
- SAM-1 cable
- PCCS cable
- UNISUR cable
- SAM-1 Extension to DR
- MAREA cable
- BRUSA cable
- MISTRAL cable

Telefónica's international network is supported over infrastructure owned by Telxius, a Telefónica Group company.

More than 17,000 satellite accesses

More than 200 B2B customers in more than 25 countries

11 Satellite Teleports

3 NOCs
Spain (Spanish/English)
Peru (Spanish/English/Portuguese)
Brazil (Portuguese/Spanish/English)

Wide service portfolio: VSAT, Backhaul, Mobility, Teleport Services.
